

Arctic Habitat by Una

What is the Arctic habitat?

The Arctic is full of ice.
It's a very cold place
which contains many
unique animals with lots
of fur. But now the earth
 has global warming
and many of these
animals are in danger.

Arctic Hares

Arctic Hares 🐰 **will form large groups. While some rest and feed, others act as guards. They gather together in the snow, under bushes or behind rocks. They also dig tunnels in the snow, ❄️ called burrows, where they live.**

What does the Arctic look like?

The Arctic habitat is a very cold place at the top of the world 🌍 where some plants 🌱 and animals live, it is made up of the Arctic Ocean and features many 🌊 icy glaciers and tundras. A tundra is a place featuring flat plains with no trees. 🌲

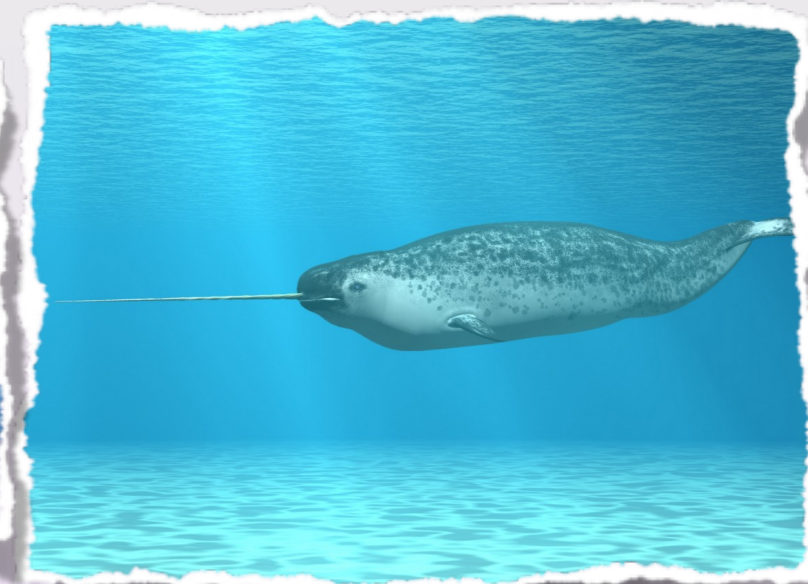

Arctic Plants

Approximately 1,700 species of plants live on the Arctic tundra including: flowering plants, dwarf shrubs, herbs, grasses, mosses, and lichens.

Arctic Animals

Polar bears 🐻 and Arctic foxes 🦊 are adapted to the extreme weather of the Arctic region. Walruses and humpback 🐳 whales 🐳 live in the Arctic Ocean. Several kinds of penguins, including the emperor penguin, live in Antarctica, as well as narwhals.

What do I think about the Arctic?

I love  the Arctic fox and the Arctic hare. And I feel the Arctic is a pretty habitat! If you are lucky you could see the northern lights there.

Thank you for listening
👂 to my presentation on
the Arctic 🥶 habitat 🙌
the Arctic 🥶 habitat 🙌
